

Make your home monsoon ready with Fenesta doors & windows

Rainy season is back in our country with its freshness, liveliness along with the issues of water seepage. Houses that are not properly waterproofed against the cascading rains face a harrowing time and it is important to minimise the inconveniences the constant downpour would cause.

- Range of windows and doors offered by Fenesta are a perfect solution to deal with the torrential downpours and high velocity winds, especially in high-rises where rain spears in at a 45 degree angle. Fenesta has two unique features built into its products specially meant for monsoons , 'Hurricane Bar' that withstands windspeeds of upto 245 kmph 'Rain Track' that prevents the ingress of rainwater by acting like a dam on the window. These unique monsoon-proof features of these products come with a vast improvement on the drainage mechanism than conventional UPVC windows. The drainage mechanism in ordinary windows is inadequate for heavy monsoons as the force of the wind pushes the rain water inside. In addition to the Hurricane Bar and Rain Track Fenesta products also have a special **Sill arrangement**: This special system prevents air pressure from pushing the rain water indoors. Instead, the rain water flows down vertically at some distance from the wall. There is also a **Gradient slope**-a track at a downward slope of 5 degrees ensures accumulated rain water flows out.

Fenesta's proprietary UPVC formulation, comprising of special additives, ensures all windows and doors retain shape, colour and lustre for long even when exposed to temperature variations or intense UV radiations in Indian Climate. The technology used is not just to make home monsoon ready but also to make them environment friendly, for which two basic criteria are - windows must be built with energy efficient materials and it must make efficient use of energy. The thermal insulation properties of UPVC are far more superior than conventional windows. Insulation in Fenesta windows is further improved by the use of the most effective sealing material between the wall and frame, double , triple or laminated glass and fusion welded joints. All these ensure that there is no gap for air , water or even dust to come in thereby securing the home.

Testimonial

Sukhdev Sen, Mumbai, a happy customer of Fenesta says, *"At 15th floor weather conditions are extreme with high wind velocity and intense monsoon but Fenesta windows have been so far so good. I would like to thank Fenesta local unit which was always there to help me out and its management for delivering what I thought I would like to have as a window solution."*

About Fenesta

Part of 125 year old prestigious DCM Shriram Group, Fenesta specializes in design, manufacture, installation and service of precision-engineered, 100% customised UPVC windows and doors. With its diverse capabilities, deep knowledge of the Indian market, and global technologies, it has produced and installed over a million windows that can withstand India's extreme climatic conditions. Today, Fenesta has firmly established itself as India's no. 1 windows and doors brand, with presence in more than 100 cities across the country.
